DETAILED ACTION

Allowable Subject Matter

1. Claims 5, 6, 8, 9, 13-20, 24 and 35-39 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claim 5 recites a chemical analysis system comprising: a means for spotting a sample liquid onto a first analysis element, a means for spotting a sample liquid and a reference liquid onto a second chemical analysis element, an incubator which houses the first and second chemical analysis elements, a concentration measuring means that measures the optical density of a coloring reaction on the first chemical analysis means, an ionic activity measuring means, and a temperature control means comprised of a heating means that cooperates with a first and second pressing member. Claim 9 recites the elements cited from claim 5, adds an additional detector, and places the first and second holding means in the incubator. Claim 16 contains the limitation of the temperature control means comprising one single element that cooperates with a first and second pressing member. Claim 39 adds the feature of barcodes on the first and second elements and a barcode reader. The barcode reader reads the bar codes and the temperature means automatically sets the temperature in response to the information from the bar code. The Examiner considers the cited reference Bogen to be the closest prior art. Bogen teaches a slide staining machine that has two spotting devices, a potentiometer and an incubator. Bogen does not teach a single incubator that maintains different slides at different temperatures.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
